Python Certifications

Type: Course

All of the lessons and projects are publicly available. You don't even need to create a freeCodeCamp account to access them. But if you want to save your progress and eventually earn certifications, you will need to create an account.

go to <https://www.freecodecamp.org/learn/>
or click on the link given on the right

- [Data Analysis w/Python Certification](#)
- [Machine Learning w/Python Certification](#)

Scientific Computing with Python Projects - Arithmetic Formatter

Create a function that receives a list of strings that are arithmetic problems and returns the problems arranged vertically and side-by-side.

You can access [the full project description and starter code on repl.it](#).

After going to that link, fork the project. Once you complete the project based on the instructions in 'README.md', submit your project link below.

We are still developing the interactive instructional part of the Python curriculum. For now, here are some videos on the freeCodeCamp.org YouTube channel that will teach you everything you need to know to complete this project:

- [Python for Everybody Video Course](#) (14 hours)
- [Learn Python Video Course](#) (2 hours)

Data Analysis with Python Projects - Mean-Variance-Standard Deviation Calculator

Create a function that uses Numpy to output the mean, variance, and standard deviation of the rows, columns, and elements in a 3 x 3 matrix.

You can access [the full project description and starter code on repl.it](#).

After going to that link, fork the project. Once you complete the project based on the instructions in 'README.md', submit your project link below.

We are still developing the interactive instructional part of the data analysis with Python curriculum. For now, you will have to use other resources to learn how to pass this challenge.

Machine Learning with Python Projects - Rock Paper Scissors

For this challenge, you will create a program to play Rock, Paper, Scissors. A program that picks at random will usually win 50% of the time. To pass this challenge your program must play matches against four different bots, winning at least 60% of the games in each match.

You can access [the full project description and starter code on repl.it](#).

After going to that link, fork the project. Once you complete the project based on the instructions in 'README.md', submit your project link below.

Programming for Everybody (Getting Started with Python)

★★★★★ 4.8 133,118 ratings | 👍 98% Share

Charles Russell Severance

TOP INSTRUCTOR

Enroll

Starts Jul 10

1,540,535 already enrolled

This course covers-

- Installing Python and write your first program
- The basics of the Python programming language
- Usage of variables to store, retrieve and calculate information
- Utilization of core programming tools such as functions and loops

Click [here](#) or go to

<https://coursera.org/share/fc9b748983a12111ffe874928378f224>

TOP INSTRUCTOR

Enroll

Starts Jul 10

513,400 already enrolled

Offered By

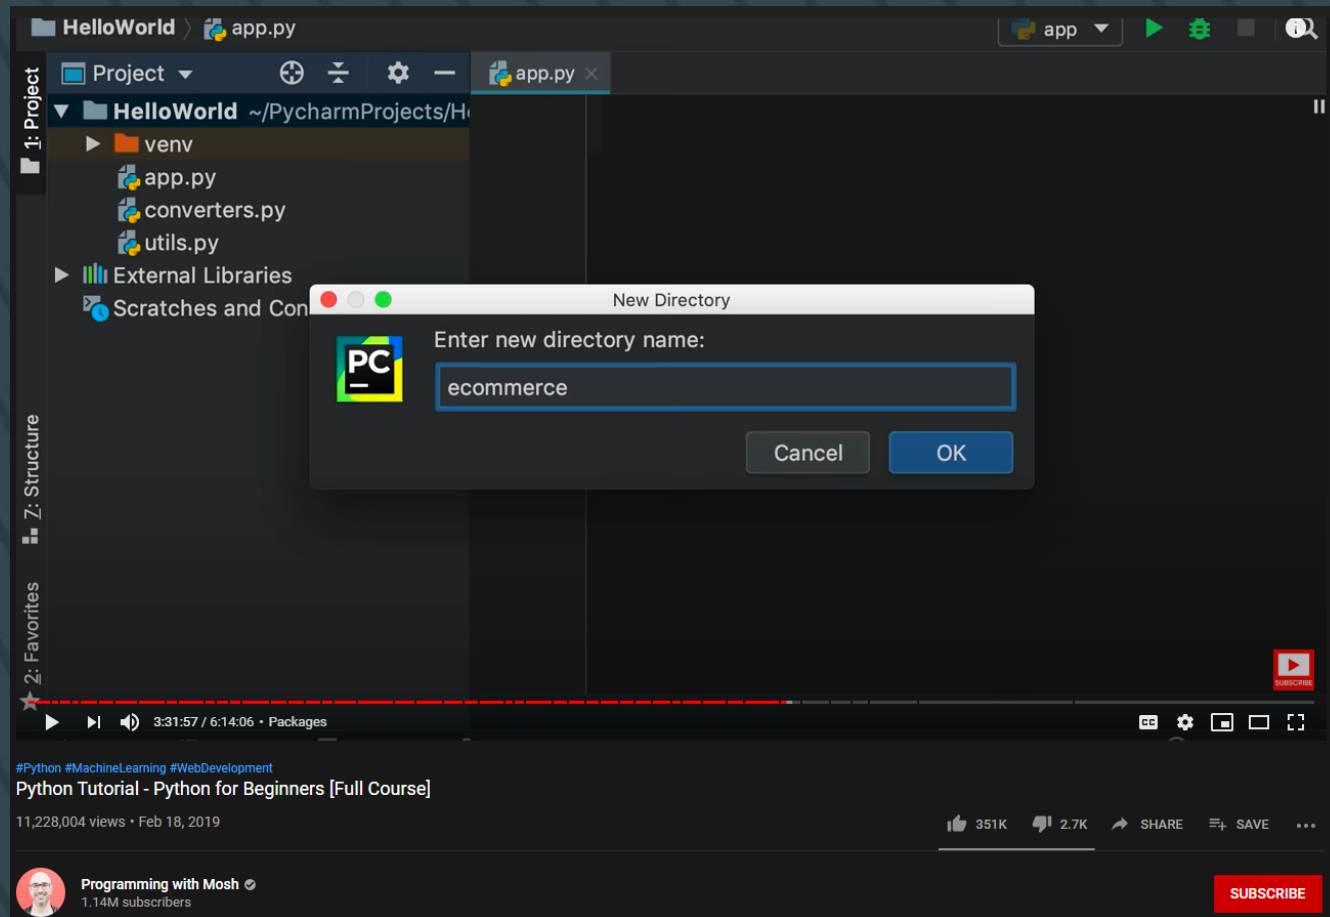

After completion, you'll be able to-

- Explain the principles of data structures & how they are used
- Create programs that are able to read and write data from files
- Store data as key/value pairs using Python dictionaries
- Accomplish multi-step tasks like sorting or looping using tuples

Python Tutorial - Python for Beginners

Type: Tutorial

This tutorial includes-

- Python fundamentals- variable and data structures
- Mathematical operations, conditional statements and loops
- Object oriented programming
- 3 projects involving Django

Click [here](https://youtu.be/_uQrJ0TkZlc) or go to:

Applied Machine Learning in Python

★★★★★ 4.6 5,882 ratings | 👍 91% Share

Kevyn Collins-Thompson

Enroll

Starts Jul 10

170,905 already enrolled

After completion, you'll be able to-

- Describe how machine learning is different than descriptive statistics
- Create and evaluate data clusters
- Explain different approaches for creating predictive models
- Build features that meet analysis needs

Click [here](#) or go to

<https://coursera.org/share/60ee2fb69f15684a84abd78123f91368>

Become a Python Data Analyst

Take your data analytics and predictive modeling skills to the next level using the popular tools and libraries in Python

★★★★★ 4.0 (387 ratings) 3,149 students enrolled

Created by Packt Publishing Last updated 6/2017 English English [Auto]

What you'll learn

- ✓ Learn about the most important libraries for doing Data Science with Python and how they can be easily installed with the Anaconda distribution.
- ✓ Produce informative, useful and beautiful visualizations for analyzing data.
- ✓ Perform common statistical calculations and use the results to reach conclusions about the data.
- ✓ Understand the basics of Numpy which is the foundation of all the other analytical tools in Python.
- ✓ Analyze, answer questions and derive conclusions from real world data sets using the Pandas library.
- ✓ Learn how to build predictive models and understand the principles of Predictive Analytics

Academy

Python Track

Python Track

Type: Course

The full Python track takes 75 hours to complete on average.

It covers the basic syntax of Python, and an introduction to some standard libraries. It also has the Django framework, which is used to build web applications.
